

Functionality Description:

This screen is used for displaying the other medications related information of the patient. The system can maintain a list of medications used by the patient other than those listed in their prescription records. This can include OTCs, supplements etc. that can then be included during the Drug Utilization Review (DUR) check.

Here the patient’s other medication information can be changed.

Various action items are shown at the bottom of the screen which the user can select for going to that respective functionality section.
